**NEWS IN BRIEF****Maharishi in factories bid**

MAHARISHI Mihesh Yogi's followers in the UK are asking the National Enterprise Board and other public and private sources of funding for money to take over or set up factories to combine manufacturing with transcendental meditation. They are hoping to make a bid for the recently closed Meccano factory in Liverpool, in combine new electronic products with some of its existing range.

Under the scheme, employees would work for six hours each day and practice meditation for the other two, on full pay. The effect of their meditation would "increase integrity and harmony in the collective consciousness of the whole nation," a spokesman for the Age of Enlightenment Company Ltd told CW.

There is already considerable expertise in electronics among the Maharishi's followers worldwide, the spokesman said.

**MD resigns**

FOLLOWING the resignation of Sir Robert Clayton as chairman of fledgling semiconductor manufacturer GEC Fairchild, the managing director, David Marriott has also resigned. He has also quit as a vice-president of Fairchild Semiconductor in the US. Murray McLachlan is acting as managing director.

**£7m order for GEC**

THE Post Office has placed orders worth £7.9 million for 30-channel pulse code modulation equipment from GEC Telecommunications. GEC's orders now total over £14 million.

**Look into future**

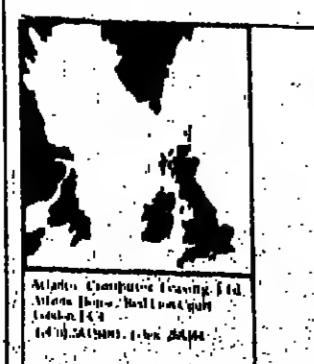

A SMALL exhibition now at the Design Centre, Haymarket, until March 8 aims to show that general public what offices will be like in the future. "Tomorrow's Office Today" includes one small business system, one screen word processor and the Microwriter hand-held WP.

**Rising costs kill Chaps cheque clearing project**

In addition, they will have to compensate the main Chaps contractor, ICL, for the cost of supplying a lot of terminals to prospective users.

Chaps steering committee chairman Chris Gibbs said: "We are willing to talk to ICL if they are out of pocket."

Scraping the project, just a few months before it was due to go live, has cost the 12 major UK banks' that were funding the system more than £2 million.

According to Gibbs, the Chaps steering committee decided to

Middlesex. This will now have to be returned to ICL.

Chaps would have handled

"same day" transactions involving large payments between dozens of banks, a task traditionally done by messengers.

Chaps would have complemented the existing BACS system at Edgware which handles high volume direct debit transactions.

According to Gibbs, the Chaps steering committee decided to

carry on with the project 18 months ago despite the objections from potential users because additional costs were not anticipated such as the cost of data encryption hardware for terminals.

In addition, the whole concept of basing Chaps on a central system was now seen as rather outdated and any future system would probably involve a network linking user banks' computers.

# Big boost on the way for IBM business market

MAJOR product announcements in business computers, the 4300 series and the \$100 communications processors are expected from IBM this year, with the launch of the H-series of top-end machines likely in the last quarter.

This was the consensus which came out of the C/S-Yankee Group conference, The IBM Impact, in London (see Software File, page 7).

In the business computer area, a cheaper System 33 compatible with the System 34 is expected, and a System 36 is also planned.

There has been much debate whether this will be an upgrade for the System 34 or a small System 38. Given the problems with the System 38, the former is now believed to be more likely.

System 34 and System 38 are incompatible; the operating sys-

tem of the 38 is new and is part of the fall-out from the Future Series Big Bang. Future Series, which should have taken over from the 370 in the late 1970s, was abandoned in 1974.

The RPG III on System 38 is a very high level language needing considerable recompilation of RPG II programs from System 3 and System 34. Further in the future a System 40 to provide an upgrade path for System 38 users is likely.

The 4300 line, machine above the 4341 and dubbed the 4351 is considered a certainty, as is a model between the 4331 and 4351. The latter machine could be offered as a field-upgrade for the 4331 and has been dubbed the 4336.

Commentators are certain that a 4321 or 4325 exists and that, if announced it would have an important role to play in IBM DP Division's attack on the office automation market, but IBM might decide to kill the product if it turns out not to fit in with marketing plans.

Another important product waiting in the wings is the electronic digital version of the 3750 telephone switching system.

Dubbed the 4750, this product could mark IBM's entry into the private telephone system market in the US — the 3750 and 1750 systems have never been announced there — and would plug a gap in its communications processor product line but-

tem the 3705 front-end processor and the traditional 3750 telephone system.

Price cuts on DP division's 3730 shared logic word processor are expected this year, coupled with an announcement this year.

Native mode DP/PX word pro-

cessing is also under development but is not likely to be announced this year.

of word processing under the DP/CX operating system on the 8100 distributed processor.

Native mode DP/PX word processing is also under development but is not likely to be announced this year.

TO remain competitive in the IBM 4341, National Advanced Systems has initiated an enhanced and less expensive version of its AS/35.

In line with its policy of renaming the machines earlier sold by Itel, National is calling the new processor AS/3000. In addition, the AS/35, a relaunched soon as the AS/36.

The AS/3000 offers a new system console and a more compact design. The basic two megabyte machine costs \$425,000 plus compared with \$600,000 plus for the AS/33 which was launched last year.

National has also announced the big IBM-compatible processors built by Hitachi (CW, January 11). National, the three field-upgradable machines are based on Hitachi processor that was earlier sold by Itel as the AS/36.

The AS/3000 offers a new system console and a more compact design. The basic two megabyte machine costs \$425,000 plus compared with \$600,000 plus for the AS/33 which was launched last year.

The Council for Educational Technology is being retained, but its work is to be the subject of a "searching review". Public funding for the National Electronics Council is to be phased out.

Studies are going ahead at the board to see which of its functions the UGC could handle, which the UGC could not cope with, which the universities could carry out themselves, and whether the change might lead to more administrative work.

Some or all of the board's technical staff could be transferred to the UGC. Their job is to advise on the purchase and operation of university computers.

Other quangos being abolished following Sir Leo Platzyk's study include the Police National Computer Policy Committee, which was

set up to advise on the original design of the PNC system, and the Department of Industry's advisory board on electronic components and automation.

The Computer Agency Council, which advised the Central Computer Agency, was wound up last summer.

The AS/3000 offers a new system console and a more compact design. The basic two megabyte machine costs \$425,000 plus compared with \$600,000 plus for the AS/33 which was launched last year.

## Byte Shop creditors likely to be paid following Comart takeover

FINANCIAL problems of The Byte Shop (1980) chain of computer stores was resolved last week when, as expected, it was taken over by microcomputer distributor Comart (CW, December 13, 1979). The new company has now been sold to Comart.

David Broad, managing director of Cromenco and Horizon distributor Comart, said that all six shops run by the company — in Ilford, London, Birmingham, Manchester, Nottingham, and Glasgow — would be retained with all the staff.

Some £385,000 of shares and loans is being put into the company by Comart. From the purchase, the secured and preferential creditors of the Byte Shop should be paid in full, according to the company's receivers, Stoy Hayward and Partners.

The receivers transferred the assets of the original Byte Shop to a new company, Summary 87, trading as The Byte Shop (1980) when it collapsed last year (CW, December 13, 1979). The new company has now been sold to Comart.

Stoy Hayward and Partners

## A match for ten ladies?

YOU may have seen Clive James' scathing attack on the brontosaurusian antics of the European Parliament in Strasbourg, on Russell Hart's prancing the other day. One thing the silver-tongued Antipodean did not scratch though was the activities of the middle-aged ladies he showed sitting around a revolving turntable, collating endless pages of bumph.

"Bumph?" I'm sure you cried as did I, "we know the French are backward but have they really not heard of collating machines? No wonder we are having to pay an extra billion pounds a year to finance these steam-driven bureaucraties."

I can report now, however, that the problem is not a simple one of ignorance. The ladies in question have a New Technology Agreement with the EEC.

Now you will be aware that the essence of these agreements is that nobody may be made redundant by new machinery (anything that is 3D years old is new in Strasbourg)

## Half-baked results

MOST readers must be aware by now that IBM's announcements of low-cost minicomputers over the last couple of years have had the same sort of effect on the residual values of leased IBM 370s as Attila the Hun had on house prices in Rome.

Which is why the attention of one of my colleagues was attracted to a story in the Wall Street Journal headlined "DPF Operating Profit Decreased Almost 75%".

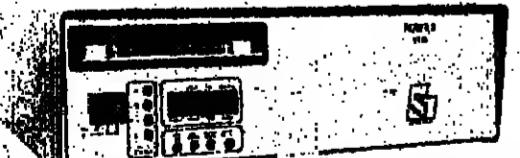

## Murphy's law

COMMENT from the general secretary of the United Kingdom Association of Professional Engineers on the recently published Finnisson report:

"Not surprisingly the hot potato of trade union representation for engineers has been smartly dropped and brushed under the carpet."

Well, all you have to do is wait for a few people to walk in and out and you'll have plenty of mosh for lunch!

## Perex Perifile cartridge data storage peripherals

The new Perex packaged 8000 series microprocessor-based data storage systems provide a robust, practical, versatile answer to your data storage problems. Available in single or dual configurations, the 8000 series is ideal for a wide variety of cartridge-based data transfer applications.

- Able to operate from either 12 volts DC, or 240 volts mains power supply
- Automatic auto correction
- Digital servo system utilizing optical encoder

## GILB'S MYTHODOLOGY

### Storing and spreading know-how

ONE component of the Design by Objectives method, which I have mentioned in earlier columns, is the source of the design ideas for giving a system the attributes desired. I call this source of ideas a Technique/Attribute Table — T/A table.

The basic idea is simple and well known in other technical disciplines. A group of similarly intended techniques, for example all known program maintenance techniques, are listed on one or more pages. In addition to the name of the technique, some data is given about the range of values that can be expected for various interesting qualities of the technique, and the costs of using the technique. References to further detailed specifications should also be given.

But don't worry, I am sure they will manage soon. Any people who can make the Cinnamom Market regulations on duck eggs stretch to 12,000 words should have no trouble.

Most of us have seen such tables for chemistry, physics, medicine, pharmacy, mechanical engineering, electrical and electronic engineering, building technology and almost every well organised discipline.

The only discipline where I have had some difficulty finding anything resembling technique/attribute tables is within the software engineering area. I hasten to remind the reader that I include databases as well as all "logware" in my own definition of software.

We have a great many publications and writings, and some of these writings even stretch themselves as far as comparing their pet ideas in suitably vague state-of-the-art terminology ("better maintenance") with a limited and selected number of easily dismissed obsolete methods. We even have some publications which compare products on a functional basis.

The objective is to improve our ability to identify technological solutions which might be promising for our purposes. At the same time, the objective is to warn us of potentially harmful side-effects of that technology.

Glegg is careful, in his short and readable booklet, to warn us not to believe blindly everything in each book and in particular

Tom Gilb is an independent consultant, lawyer and author on computer topics.

not to assume that what for many applications of technique is going to be true in your particular situation.

You must validate techniques in various ways (not trials, experience) before you can know how useful it is.

What are we losing now? we do not have a tradition collecting technical knowledge about software to T/A. A technique table format, have, up to now, lost a way of training system engineers (system engineers = system architects) for the parts of our systems. They are forced to learn a few existing techniques during initial studies, although they never be given the complete specification.

They will, by years of experience, get a feel for the attributes of the technology; they will provide us with pleasant failures while learning about all the attributes.

Finally it will be very useful for designers to update their know-how base, except some primitive manner.

## First shots in micro price war

THE skirmishing in the microcomputer market between Microsense, UK master distributor of the Apple II computer, and ITT Consumer Division with its Apple-licensed 2020, could soon end up as a full-scale price war. This is at a time when ITT is gearing up for a major push into the marketplace.

The beginning of February sees Microsense dropping the price of a 16K-byte black and white Apple II suggested retail price of £695. ITT, according to marketing manager Graham Pybus, is still considering its response.

## Honeywell prices up in US

FOLLOWING the trend set by IBM with its New Year price increases, Honeywell has announced sweeping increases in the US. These cover the new DPS 8/line announced last autumn but not scheduled for delivery until later this year. In the UK a Honeywell spokesman said there were at present no plans to announce increases.

The DPS 8/20, 8/44 and 8/52 have purchase prices increased 15%, but the top-end DPS 8/70, the only model announced in the UK, is unaffected. Storage Technology has also announced across the board price increases of between 5 and

15% for all its memory products in the US. Lowest increases are on tape drives and solid state storage.

Amdahl has upped its US prices, but only for leases. The move, seen as a measure to encourage users to buy their machines outright, involves two and four-year leases on all Amdahl models. The increases range from 6.5 to 8.3%. The licence for Amdahl's VM/Performance Enhancement software package is increased by 16.7%.

## Ferranti fire under control

FERRANTI was prime contractor on this fire service control room for the Greater Manchester Council — and soon after it was in full operation Ferranti itself suffered a fire in its Gem Mill site. Five fire engines were sent from four different stations.

The control system is based on a 128K-word Ferranti Argus 700G minicomputer and is claimed to be the first successful implementation of computer-based control in any fire service. Trials of computer-based systems in Surrey and Strathclyde in the early 70s were discontinued because they gave an advantage over previous methods.

Response time is quicker with this system only when the service is very busy. Under normal operations the benefits are more reliable location of any fire in the city's 80,000 streets and more efficient deployment of resources.

## RAIR Terminal choice Choose from the best Best terminals. Best prices Best delivery

### H1410/1420 VDU's Low Cost Video Terminals £590 or from £30 per month

Two new low cost VDUs featuring full colour screens, 24x80 screen, and additional numeric keypad. Features include upper-and-lower-case characters, alternate function keys, high-low intensity, blink or no display, field and column tabulation, audible alarm.

### M200 High-Speed Matrix Printer £1995 or £100 per month

Desk top 132 column super-fast 340 cps high speed printer. Major features include: 11 position form length select, 32 international character sets plus 32 international characters, serial interfaces, easy-load cartridge ribbon, front or bottom paper feed, 10-part sprocket feed paper up to 18 inches wide.

### SILENT 700 Portable Terminals From £105 or £56 per month

Range of microprocessor controlled lightweight terminals featuring a field proven thermal printing technique giving silent printing at 30 cps. Options include built-in acoustic couplers and a non-volatile magnetic bubble memory capable of storing 20K to 80K characters. This feature allows full editing of data prior to transmission.

### DECWRITER IV Desk Top Terminal £795 or £40 per month

New desk-top microprocessor driven terminal, operating at 300 baud, printing at burst speeds up to 45 cps. Major features include firmware selectable character sizes, horizontal and vertical spacing, tabulation and margins. The keyboard keys like a typewriter and the 8x7 matrix print-head produce clear printing.

### HYTERM Word Processing Terminals From £1900 or £95 per month

New range of microprocessor controlled 'display-wheel' terminals for word processing applications. Features include proportional spacing, justification, carriage, bold printing etc., plus all standard printer features. Available in metal or plastic display wheel giving widest range of type fonts.

## Not to seek compensation

LOGICA has stated that it will not be seeking any compensation following the cancellation of the Clearing House Automated Payments Scheme (CHAPS) (January 24). Logica is owed no money by the CHAPS steering committee, the organisation representing the 12 big UK banks that were funding the project.

Logica says that the people working on CHAPS have all been found new projects to work on.

## Nixdorf turnover up 23%

Founder and head of the company, Heinz Nixdorf, reported that the company is to make a big push in communications, which currently makes up about 20% of its business. Communications products include the data telephone, an internal telephone switch, plus points of sale and banking terminals.

The company forecasts an other 20% increase in turnover in 1980.

**PAGE SIX** for programmers and analysts

# Does your physical appearance brand you as unemployable?

APPEARANCES can be deceptive, but as anyone who has ever been for an interview knows, they can also be very important. An interviewee has about half-an-hour to project his personality and ability, and when he has left the prospective employer is going to remember vividly something as trivial as a smile on the face or a slight prudential accent.

Imagine, then, being slumped in a wheelchair without the use of arms or legs, and with speech suddenly impaired that the interviewer can hardly tell what you are saying. For a disabled person the battle to project potential through external appearance is not just nerve-racking; it is a nightmare.

A handicapped job-hunter has to make a tremendous impression on the employer to convince him that he is employable, let alone capable of doing the job in question. Unfortunately the situation usually results in the interviewer being just as nervous as the interviewee, if not more so.

Geoff Busby is the education officer of the BCS Specialist Group for the Disabled, of which he is founder chairman, and being severely disabled himself knows all about this kind of situation. At present a computer programmer with GEC-Marconi, he is well acquainted with the strain, embarrassment and heartache that people like himself suffer in their search for work.

The BCS Disabled Group was formed in March, 1975, and since then Geoff has been involved in helping the disabled find jobs and publicising their case among employers.

The subject is a sensitive one which many employers choose to ignore. If a disabled person wants to work, it seems a soliloquy remedy to most people that he should occupy his time by weaving baskets or with some other pastime traditionally associated with those who are incapable of doing an ordinary job.

This attitude suggests that someone who does not have the use of a limb is equal in terms of usefulness and mental capacity to a cabbage. Anyone who wants to use his or her full potential and play a useful role in society is hindered by an alarming amount of prejudices and fears.

Geoff Busby's own story illustrates exactly what n disabled

can do, given opportunity and determination.

Labeled from an early age as "unemployable", he took several steps to prove society wrong. During a stay at a Spastic Society centre in Buckinghamshire, Geoff saw a TV documentary about F International, the systems consultancy already featured on this page which employs housewives and other people confined to the house, including the disabled.

As chairman of the disabled committee Geoff found himself receiving three letters a week from people who had tried unsuccessfully to find work. Although he was involved with the BCS, he was not committed to finding people jobs in the computer industry.

So that people should be given the chance to find out if they were suited to that type of work or not, the BCS group ran an aptitude test. Then they tackled the problem of what to do with those who passed. Experience had shown that capability was not enough; there had to be training. A course seemed the

**Geoff Busby is perhaps unusual in holding a job as programmer/analyst in spite of severe disabilities. As education officer of the BCS Specialist Group for the Disabled he helps handicapped people to find jobs, and his goal is to make the BCS group unnecessary by changing employers' attitudes towards employing the disabled in computing.**

and for the first time Geoff was actually making a living out of working as a computer programmer.

When Silcon moved to Milton Keynes, however, he once again found himself trying to persuade employers that he could be a useful full-time member of staff. He was unsuccessful until the formation of the BCS Disabled Group.

The BCS could not promise employment, but it could provide escorts for interviews, which helped Geoff to least to break through the initial stages of getting a job.

For the past four years he has been with GEC-Marconi where he has employed as a programmer, but does systems analysis work as well. Although happy in his job, he admits that "it isn't a challenge any more."

This is something which happens to disabled people. Finding a job doesn't mean their problems are over. Often they are just beginning.

"Employers are reluctant to employ disabled people at a high level," explained Geoff, "even if they are capable of doing the work. People are frightened of the attitudes of clients or even the reaction of colleagues."

So it is easy for an employer to take on a handicapped person and then conveniently forget about him — and that means forgetting that the person has just as much ambition and drive as, if not more than, a "normal" person.

## Puzzler

$$\begin{aligned} A^2 + B^2 &= X^2 \\ A^2 + C^2 &= Y^2 \\ B^2 + C^2 &= Z^2 \\ A + B + C &= 401 \end{aligned}$$

This task here is to identify the three numbers A, B and C. (The total 401 is the smallest possible for this set of interlocking equations, where all six letters represent different integers.)

See page 53 for solution.

Geoff Busby with his manager, Chris Vickers, at work on GEC-Marconi's IBM 3270.

by Judith Morris

## SOFTWARE FILE

# Fortran 77 picked for 10 mbyte mini

At a time when Fortran is undergoing a major rethink and a potential change of image, an UK company is backing its language to be used in its new mini system, the Tri-Novum.

Computer Application Research plans to break into the mid market in a big way in the coming year, selling 10 megabyte configurations and upwards for a starting price of £10,000. The firm describes the Tri-Novum as a triple processor mini with mainframe software and no extra charges.

Several packages dealing with more familiar applications of Fortran such as financial planning are already available on the Tri-Novum.

The idea behind extending the facilities of the language to compete in other fields of data management is that companies investing in the system for a specific purpose will later find it easy to expand the software with the hardware.

• Shy is eager to prove what it can do in business applications.

## Logica plans a Cobol interface for Rapport

LOGICA plans to introduce a Cobol interface this year that should greatly extend the line-up of potential customers for its compact and portable relational database system Rapport (Software File, October 11, 1979). At the moment Rapport is offered mainly to scientific and technical users who do not want to get enmeshed with a Codasyl type system.

It was developed by Logica in conjunction with the Royal Armament Research and Development Centre and written in Fortran. A version written in the Coral real time language is under development.

The basic Rapport system costs £8,000 and occupies 10K-words on a 16-bit mini while the full Rapport system costs £12,000 and requires 25K-words. Its options include an interactive query language, back-up and recovery and a locking facility that prevents more than one user accessing the same file simultaneously.

Geoff Busby adds: "The ultimate goal is to make the system accessible for the disabled."

Shy has put a lot of effort into

to be as independent and individual as you are at present.

The other myth is that there are people who can and people who can't cope with the disabled. Most of the 'normal' members of the BCS Disabled Group had never come into contact with the disabled before, but things like feeding, pushing wheelchairs and getting bodies in and out of cars has now become second nature.

What about special aids? Not all disabled people require aids, pointed out Geoff, and where employers can call upon the Employment Service Agency for finance.

Geoff was involved with the design of an aid known as Mate, memory assisted terminal equipment. This was developed by a team of computer engineers from the University of Essex, and basically it is a light touch keyboard which will fit into any standard teletype 33 terminal.

The light touch facility makes operation a lot easier for the disabled person who has to use a stick held in the mouth or, like Geoff himself, his nose, to depress a key. Also the Shift and Control keys lock for one character when they are depressed and a light tells the user which mode he is in. The light will stay on until either another key is depressed or the Reset button is pushed. A word-store feature, made up of PROMs which each consist of 16 words, enables the user to print a word and send it to the computer.

The whole package can be produced for about £300 and so is within the reach of the disabled person.

No-one, of course, claims that a disabled person is any more intelligent or better suited to working in computing than anyone else, although Geoff Busby pointed out that if one is disabled, one is forced to discipline the mind to find the most efficient method of working — which is why many disabled people do make good programmers.

One of the most remarkable features of people like this is that so-called "intelligent" people in responsible positions have to be educated by Geoff Busby and the work of the BCS before they can appreciate that a disabled person may not look or even sound "normal" but still has a brain like anyone else.

Geoff has become professional in putting people at their

## CADC wins a Japanese foothold

WHILE interest in the Oriental market increases, the Computer Aided Design Centre at Cambridge has already established a foothold in Japanese industry.

The centre has concluded an agreement with the Institute of Japanese Scientists and Engineers for the development of the program DPB. ICI is to help with the project, which is to do with simulation of unstable state behaviour of chemical process plants, such as during start-up, shut-down and changed operating conditions.

The institute, which originally developed DPB, is to enhance the calculation facilities of the program, while the centre will be helping with its expansion on user-oriented output and input facilities.

Negotiations have been spread over a few years, and the final stage of the project is planned for completion in November 1980.

## Computer Associates prepares to enter China market

COMPUTER Associates is getting ready to market its line of IBM systems software products in China in anticipation of what it feels is bound to be a developing market in that part of the world.

In the short term the company does not expect great revenues from the appointment of EDPS Systems in Hong Kong as its distributor. At present CA estimates less than five or so IBM mainframes in China, but the move is geared towards future income from China.

Sam Goodner, president of Computer Associates International, said of the venture: "The computer market is just getting heated up in China and we feel that IBM will be getting its usual share as it has elsewhere around the world. We want to be ready when that day comes."

## Audit system

A COMPUTER auditing system from Pansophic, complete with training and telephone support, is now available for IBM users in the UK. Panaudit incorporates over 50 programs, and creates complex reports, and allows audit campaigns to be organised in the best logical order. It has already been successful in the US auditing community.

Hoskyns Modular Application Systems (MAS), are a total systems approach to the information and control requirements of organisations. During the past ten years MAS elements have been built for most applications in industry, finance and commerce. Over 1500 MAS elements have been installed worldwide. The table below gives an overview of some of the major sectors covered by MAS and other Hoskyns standard systems.

## MAS Hoskyns Modular Application Systems

Industry or Commercial Sector	Computer		Hoskyns Modular Application Systems				
	Minif	Micro	MAS I	MAS II	MAS-M	KIBS	Special Std. Sys.
Accounting	✓	✓	✓	✓	✓	✓	✓
Banking	✓	✓					✓
Distribution	✓	✓	✓	✓	✓	✓	✓
Foundries							✓
Hotels					✓		✓
Housing Associations			✓				✓

**Database query language**  
A DATABASE access system and query language, info, designed for use by non-computer personnel, is being marketed in the UK by Deric. Developed by US software house Honeywell, Mass., the system is available with Prime-based minicomputers and can be info 3 for use on Level 3 minis. In the US Honeywell offers its Deric to sell the Fortran-based system for \$6,000 (including training and support for the first year).

**OP SPOT**

# Educate your colleagues on the operator's role

In my early days as Op Spot columnist I put a straightforward but loaded question to some prominent members of the operations fraternity: "Why are operators treated as the poor relations of the computer industry and what can we do to rectify the situation?"

The answers I got were both interesting and stimulating, but no-one was able to come up with a workable solution to the problem.

Discussion centred around whether operations should be treated as it is a trade or profession. One person said that operators had been treated badly from the early days, while another blamed many of the ills of the industry on bad management.

Two years later I find that question cropping up time and time again in my conversations with operations people ronging from trainees to managers.

Early on I would point to the

lack of training and career progression opportunities, and the fact that operators get paid less than programmers and systems staff. But such an answer is little more than a cop-out — they are not the real ills of operations, just the symptoms.

The fact is that the rest of the industry really does need to be educated about the role operations staff play. It is important that they have at least some idea of what operators get up to after they have gone through the security doors and into the air-conditioned environment of the computer room.

My shift leader and I overheard this conversation and both of us smiled, as we had heard it all before. (Well, he had heard it all before as he had been in the industry a lot longer than I.)

Anyway, after trying his luck in the computer room, the data controller came to the unexpected conclusion that operating the system was much more involved than he had anticipated. He returned to data control and is still there, as far as I know.

Card readers often get jammed and have to be opened up and cleared. A former colleague (he didn't get very far because he liked to have a bit of a laugh at work) was an absolute genius at sorting out card reader and other problems with peripherals.

Many a time I would spend what seemed like ages on a card reader jam, only for him to come over and sort it all out in a few seconds. A more enlightened installation would have sent him on the appropriate courses and made him the hardware specialist of the operations department.

Running the main console is particularly satisfying as you are in control of the entire computer room. If the main console operator is on form he can do much to improve system throughput.

He does this by using the operator commands to re-set job priorities and keeping the other operators on their toes by telling them where and when stationery is to be loaded, and discs and tapes mounted.

But it is when system loops and wait states occur that the top operators come to the fore. If you want to find out who are the best operators at your site, watch for the ones who don't step away from the console when things start to go badly wrong.

The operator who is able to sort out loops and wait states is worth his weight in gold. He can prevent much down time and so help provide the best possible service to the user.

And don't forget what happens when things start to go wrong in the middle of the night shift. The official procedure may well be to contact the job controller or programmer, but many an operator will sit down and sort out the problem himself. That saves a lot of time and trouble.

This column is intended primarily for operations and staff. But this week, why not show it to the other staff at your installation and give them at least some idea of the part you play at the installation.

## Contract negotiating — how to stack the odds in your favour

THE operations manager usually finds the odds stacked heavily against him when he is involved in negotiations with the supplier of a service or new equipment.

The reason is two-fold: most sites buy new equipment no more than once every five years or so. By contrast, the typical supplier makes many sales every year and therefore has vast experience of the procedure involved in negotiating sales and service contracts.

The first step, then, is to set up a negotiating team. It should be made up of persons who have some experience of data processing and are interested in getting involved in the negotiating process.

Current service contracts should be reviewed to identify old mistakes, and that a vendor is selected using a "negotiating strategy".

The portfolio goes into the negotiating strategy in length. The following points are included:

Prenegotiation planning for each session, including what it wants to achieve during the meeting.

Play's and tactics. These can be of great help to the negotiator. For example, the threat to call off the deal if the supplier is particularly over-cautious over certain points.

Type of acquisition, several ways of buying a computer system, purchase, lease, or a combination. Have the firm willing to pay in the room.

Negotiations should be carried out in a business-like manner and the manager should try to remain calm throughout.

## New technology 'creates jobs'

JOBS as well as wealth are created faster as a country embraces new technology, according to studies just completed by Mackintosh Consultants for the German government.

The firm's chairman, Ian Mackintosh, says new technology in Germany has reduced employment in production industries but has more than offset this by stimulating growth of employment of white collar workers.

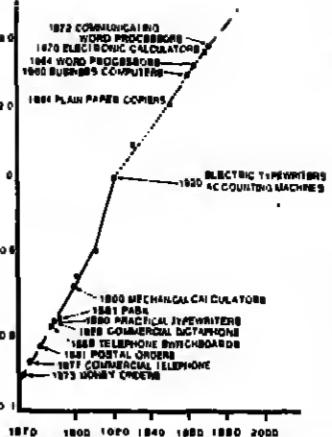

Mackintosh compares Germany with the UK by showing

that since 1985 in manufacturing UK productivity has risen by 40% while employment has fallen 20%. In Germany for the same period productivity has improved 70% but employment has fallen only 10%.

The connection between productivity improvements in offices and the stimulation of growth is demonstrated by Mackintosh in the chart (right). Each invention in office machinery, Mackintosh claims, far from reducing white collar staff, has increased them through "the considerably enhanced business volume which is stimulated by improved documentation."

Mackintosh sounds a warning, however, that endemic structural unemployment is becoming increasingly difficult to avoid, and that nations must address the technical and economic problems with "appropriate vigour." This the UK is not doing at present, he says.

"A radical change in the employment implications of new technology is under way," he adds.

The connection between productivity improvements in offices and the stimulation of growth.

## NCR steps up business in the manufacturing sector

NCR is stepping up its activities in the manufacturing sector with enhanced versions of its existing production control packages, IMCS and Mission.

Under development is a hardware/software terminal controller called Industrial Data Collection System, IDCS, which will enable either IMCS or Mission to interact in real time with factory data collection equipment built by Data Pathing. This is the California firm bought by NCR about two years ago and which has now been integrated with NCR's marketing organisation.

IDCS terminal controller, which should be ready by the end of this year, will enable NCR to offer Data Pathing terminals as part of a complete and comprehensive interactive production control hardware/software package based on an NCR host computer running IMCS or Mission.

IMCS, the interactive Manufacturing and Control System, is offered to manufacturers with a turnover of up to £10 million, and can run on an NCR 8200 or 8400 computer. An 8200-based system costs between £27,000 and £45,000 depending on the number of terminals and the

amount of disc storage, while prices for 8400 configurations are in the £80,000 to £70,000 area.

Bigger manufacturers prepared to spend at least £130,000 on a production control system can have a configuration running Mission, which stands for Management Information System Support Online from NCR. Mission can run on any NCR mainframe from the 8455 upwards.

IMCS already handles jobs like inventory management, work in progress, materials

requirements planning and order processing and has now been enhanced with modules for sales analysis and purchasing and receiving.

Mission, which incorporates the Total database management system, already handles tasks like routing, costing, materials and inventory management, and has now been enhanced with order processing and work in process modules. Mission was originally developed by NCR for its own internal production control.

## PEOPLE and EVENTS

### Managing director of Eurocom Data

**EUROCOM DATA**, the UK subsidiary of Eurocom Data (Holdings) has announced the appointment of Ken Jameson as the company's managing director.

Eurocom Data (Holdings) is the European COM service company owned by National Westminster Bank.

Jameson has been with the company since its inception in 1974 and has been a director and senior manager UK since 1977.

He has also held positions with ICL and Rowntree Mackintosh.

Philip Dobson and Jim Pearcey have been promoted in the business systems marketing division of Univac. Dobson has become national sales supervisor in the executive section. He was previously a management consultant with Amtran Impex Morris.

John Kitchen has become a consultant with BIS Applied Systems, where he will specialize in the executive section. He was previously a management consultant with Amtran Impex Morris.

John Wood has become area credit manager for Western Europe with Ampex. He has recently been responsible for credit functions with a number of companies related to the computer industry.

William Orthwein is the new chairman of McDonnell Douglas Automation. Joseph Quackenbush, previously executive vice-president, becomes president.

Frank Gibbs has become sales executive for Oxfordshire with Computer Automation. He was previously general manager with Digico and a sales executive for OEM products.

Chris Young and Ken Cockrell have become sales executives with Ebit Data Systems. Young, formerly with Prime Computer, will be responsible for the Midlands. Cockrell, who is to take charge of the North West, previously worked for Redifon.

Christopher Ball has become training consultant for GMS Microsystems. He joins the company from the NCC. Nicholas Fareham, a former teacher who has been with GMS for 14 months, is sales executive responsible for selling the range of financial and administrative packages which the company offers as a bureau service.

Graham Burke has been appointed director and general manager of Plessey Communication Systems. For the past 12 years he has been with ITT Business Systems Group and was formerly general systems manager for the whole ITT Business Systems group in the UK.

Changes in the working lives of the population and the effects of the technological revolution will also mean changes to the working methods of local government. These topics are to be discussed at the national computing seminar organised by Lamsac and to be held from June 30 to July 3. The event is aimed at those involved in short- and long-term planning of council activities. Details can be had from the Director, Lamsac, 3 Buckingham Gate, London SW1.

The National Long Driving Golf Championship is to be sponsored for the second year by NCR. The competition, open to both amateur and professional golfers, is in aid of the Golf Foundation.

This year the winner of the contest will receive £1,500 and the runner-up £500. Other finalists in the junior and senior sections will receive £250.

Four regional heats will be held throughout the UK between July and September and the final is to take place at Stoke Poges Golf Club on September 28.

The National Enterprise Board's Nexus office systems subsidiary has not provoked as much political controversy as Immos, but it is no less embolic. Tim Palmer interviewed its managing director Muir Moffat, who tells why he believes Nexus is going to win, for the UK, a larger share of the integrated office systems market than the country has in

data processing. He says that the giants in this field, IBM, ITT and Xerox, have too many vested interests in obsolescent technologies such as copiers, magnetic cards and dictaphones to be able to stay ahead in the race.

Moffat sees the main job of Nexus systems integration rather than R&D.

# Nexus wants a bigger market share for UK

## By Tim Palmer

THE name Nexus is said to have been derived from the root of the Latin word *nexus*, meaning a bond or linked group, plus for office systems.

Much the most shadowy of the National Enterprise Board's high technology ventures, the office systems company is beginning to take shape and its ambitions are becoming clear.

Ambitious, it is too no less than to challenge the entrenched might of the US giants like IBM and Xerox, and to win for the UK a much larger share of the world market for integrated office systems than it has managed to win in data processing.

Managing director Muir Moffat believes that it can be done, and that an embryonic company like Nexus is better placed to do it than are the giants with their vested interests in irrelevant office technology.

He also believes that an essential element of the large-scale integrated office system of the near future is what one might call speech processing in addition to the accepted text, message and video processing.

Moffat demonstrates that only a proportion of the potential productivity gains offered by office automation can be achieved by automating the tasks of the secretary.

The gains can go much further if the productivity of managers can be improved.

"Voice — speech — and handwriting are what managers use most to communicate," he says. "Many meetings are held simply to get all the information together in one place, and if we can reduce the need for this, we can cut down travelling time as well as time spent in meetings."

A system needs to be able to store and forward combined text and voice, so that managers can append voice messages to documents. It is estimated that 70% of attempted telephone interactions fail for one reason or another, although the failures are often hidden from managers because their secretaries try several times before getting the right person. The ability to store and forward speech in a system would help enormously."

Among the problems faced by companies like Xerox and IBM, Moffat believes, is their enormous vested interest in copiers, magnetic card typewriters, dictaphones, computer architectures which cannot accommodate speech.

"When you look at the specification for Xerox's proposed X-ten network in the US, you find it is designed to offer wideband services appropriate to transmitting images — complete documents of the kind produced by copiers. But nearly all the information we need to transmit can be reduced to bits which do not need such wide channels for fast transmission."

All you need for digital voice is 64Kbps."

IBM seems perversely committed to small magnetic cards for transferring text and Wang, which in Moffat's view has got its integrated office act pretty much together, nevertheless seems to have overlooked the need for voice, while the whole point of integrated office systems is that they should draw away with the mounds of paper generated by Xerox's copiers.

"In one large, well-known company the progress of a single document from senior management was traced. It passed down through eight levels of management over three weeks, and 250 copies were made of it. Or rather, 250 copies were traced — there may have been others."

He believes that to protect this enormous market, the big companies will try to inhibit the adoption of appropriate technology, all of which, Moffat believes, already exists.

Systems integration rather than development of technology is therefore the Nexus role. A first step has already been taken with the commissioning of an interface to enable output from the Logica VT-100 word processor, marketed exclusively by Nexus, to be produced on a Multitech facsimile machine. Nexus is taking over the marketing of all Multitech's products in this field.

Core and key element of the Nexus strategy is the enormously powerful and highly original Delta II system developed by the Exxon company Delphi of San Francisco. Nexus has paid \$2 million for UK manufacturing and European marketing rights for the Delta for office automation applications.

A multiprocessor multi-bus fail-safe system, the Delta was initially developed as the basis of an automated telephone answering service. It therefore already includes what Moffat regards as vital facilities for marrying speech to text, for speech storage, retrieval and manipulation. Operations can also be controlled using a 200-word voice-command vocabulary, which Moffat believes could be extended by storing multiple 200-word command sets.

The aim of Nexus is to be able to offer all the elements of a complete integrated office system for a large company. The inclusion within the system of data processing as well is a possibility, but Nexus envisages providing all the necessary interfaces and protocols to enable the system to be linked to any manufacturer's mainframe so

upwards compatible with the VTS 100, and Nexus will also be commissioning companies to develop and build for it low-cost workstations for use with the Delta. These will have to combine text, data, graphics, image and voice, and Moffat believes that a manager's terminal should cost not more than \$1,000.

At the bottom end of the range, a basic electronic typewriter is also needed and the Ricoh daisy wheel printer for which Nexus has UK manufacturing rights.

Upwards compatible with the VTS 100, and Nexus will also be commissioning companies to develop and build for it low-cost workstations for use with the Delta. These will have to combine text, data, graphics, image and voice, and Moffat believes that a manager's terminal should cost not more than \$1,000.

From the Continent, Nixdorf is the first to take the plunge, and Philips, Siemens, CGE and Olivetti are laying their plans while CII-HB and Triumph-Adler are also interested.

In the US, IBM, Xerox, GTE, AM International, and Wang are in the thick of it, while Datapoint has just declared an interest and ITT is still looking for the right acquisitions.

A multiprocessor multi-bus fail-safe system, the Delta was initially developed as the basis of an automated telephone answering service. It therefore already includes what Moffat regards as vital facilities for marrying speech to text, for speech storage, retrieval and manipulation. Operations can also be controlled using a 200-word voice-command vocabulary, which Moffat believes could be extended by storing multiple 200-word command sets.

The aim of Nexus is to be able to offer all the elements of a complete integrated office system for a large company. The inclusion within the system of data processing as well is a possibility, but Nexus envisages providing all the necessary interfaces and protocols to enable the system to be linked to any manufacturer's mainframe so

Nexus UK's low cost word processor with single-line display, the C-text, is made by Ricoh in Japan and acquired in the takeover of UDS.

The VTS 100 screen word processor is made by Logica and marketed by Nexus. Logica is currently working on a more advanced version.

## Ready to take on IBM and Xerox

FORUM 80, the annual conference of the IBM Computer Users' Association, will take place at the Royal Bath Hotel, Bournemouth, from Tuesday to Thursday, April 15 to 17. The general theme is Man, Machines and Money, and star performers include Robert Mackenzie on the economic state of the nation, and Edward de Bono on lateral thinking.

IBM chairman and chief executive Eddie Nixon will give a round-up of the last 12 months; Reay Atkinson, now Under-Secretary for Computers, Systems and Electronics at the Department of Industry will talk about microelectronics in the UK, and Howard Anderson, president of the Yankee Group will discuss computers in the home.

## Fujitsu develops Josephson junctions

GIVEN that Nexus has ambitions to slug it out head-to-head with the big boys of the office market like IBM, Xerox and ITT, what kind of company is it genetically?

It is primarily a marketing company, dedicated to achieving very strong systems integration skills.

"There has been a fundamental shift in the balance of power between marketeer and engineer," says Nexus managing director Muir Moffat. "Some technology is now available that is much easier for a marketer to recognise an unfilled need and then find an engineer design a product to meet it. There is so much technology around that there is no need to invent new ones."

In general, therefore, Nexus will be a commodity manufacturer to produce products to Nexus specifications for which in many cases it will have sole marketing rights.

Outside the Delta itself, Moffat is very persuasive, but two important doubts overshadow the Nexus venture. Is an integrated voice facility really as vital as he believes, given that many people regard speech as too untidy and imprecise to be accorded the same importance as the written or displayed word?

If Nexus can convince potential customers of this, the other question is whether a new, small, unknown company can really make a success of such a high-value low-volume product as the Delta.

For a market which did not exist three years ago, the integrated office communications business is becoming extremely crowded. In the UK, contenders who have shown their hands include GEC with its acquisition of A.B. Dick of Chicago; Plessey, which wants to promote its electronic telephone switch, including systems integration and testing, this should grow between 30 and 50 within five years.

If it has to, Nexus may be a manufacturer itself, but says Moffat, "but we prefer not to while there is capacity in the UK."

The National Enterprise Board has 80% of the shares in Nexus and is not precluded from taking stakes in companies with which it collaborates, if the relationship would cement a relationship. It is not, however, on the cards.

Nexus welcomes the government's plan to sell off its private sector once it is viable company.

FACED with the problem of handling about 800 repair requests a week from tenants in 12,500 homes in the district, Wrexham Council has installed an IBM System 34 and four VDUs on which to run its housing maintenance service. It replaces a manual service which involved filling in special job tickets after a clerk had found the relevant house information card.

If more than 100 department totals are required Swada has

provided the user with a "paging" system for keyboard keyboards have been introduced in the UK by Swada.

Called the L45 family of ECRs, comprising the L45-20, L45-25 and L45-30, they have been built to Swada's specifications and a new set of keyboard headings on the second level come into use.

In addition to these features, the L45-25 has a transfer mode which can be used for transferring information from one register in one or more other registers.

Both the L45-20 and L45-25 are available in the UK now, and the L45-30 will be supplied from the end of this year.

Prices range from £2,400 to £3,200.

The Workshop is a must for today's DP professional. Structured Programming is now fairly well understood and many installations have benefited from it. But it is becoming increasingly obvious that much larger payoffs come from improving the Analysis and Design processes. Productivity increases of 3 to 1 and maintenance improvements of 7 to 1 are not uncommon. This 5 day intensive residential workshop gives participants all the skills they need to apply these techniques. EDUCOMP has no axe to grind for any particular methodology. Approaches which are compatible with the Data Directed Design Approach of Jackson and Warmer and approaches compatible with the Functional Decomposition approach of Yourdon/Constantine are both taught. They both need to be taught - different situations need a different approach.

**ABOUT EDUCOMP**

EDUCOMP is a leading North American DP training organisation. Its courses on Structured Methodology are based on wide experience of actually using the techniques in a wide variety of installations. Our North American clients include The Government of Canada, Gulf Oil, Home Oil, DPMA, Association for Systems Management, Gandalf, Bell Northern Research, Hudson Bay Company, Los Angeles Times, Blue Cross and The U.S. Government.

EDUCOMP serves North America with offices in Maple Ridge, Edmonton, Toronto, Ottawa, Montreal, Halifax and Los Angeles.

**THE INSTRUCTOR**

The Instructor is Ron Taylor, the President of EDUCOMP. Ron is British and a former Assistant Director of the Management Systems Training Council. He has unrivalled experience of Structured Methodology. On a consultancy basis, he has installed the methodologies, prepared standards and managed implementation in a wide range of companies from coast to coast in the U.S. and Canada. He has an excellent reputation as a lecturer. Being British, he also has an understanding (often lacking in North America) of the differences in approach needed in the UK as opposed to the U.S. and Canada.

**GUARANTEE OF QUALITY**

EDUCOMP's guarantee is unique and can only be given by a company totally confident of the excellence of its product.

If, in the sole judgement of the client, any course does not justify the time and money spent, EDUCOMP will not only cancel the course fee, but will reimburse the client for the attendees' salary for the period of the course.

**REGISTRATION DETAILS**

The course fee is £375 plus V.A.T. for the first registrant and £320 for subsequent registrants. The fee includes accommodation from Sunday to Friday, including all meals, coffee and tea. The course documentation includes over 500 pages of notes. The formal sessions run from 9.30am to 4.30pm but participants should be prepared for a substantial amount of syndicate evening work.

Prepayment of course fees is not necessary, we will invoice you later.

To Register: Please airmail name or person making the booking and attendee to:

BOC Datasolve

BOC Datasolve Education, 9 Rochester Row, London SW1 1LA.

March training... Book your ticket now.

IBM Operations and software courses available.

If you need training which is relevant, practical and important, Datasolve's courses will take you where you want to go. We'll give you the benefit of years of experience and knowhow. Our instructors aren't just good teachers; they've done the job themselves. And there are plenty of satisfied customers who've travelled with us.

From beginner to fully-fledged professional we've structured our courses to give you the career progression you need. You'll get plenty of personal attention — classes are small — and so progress is fast.

We'll make sure you're on the right track.

Hampshire Constabulary Headquarters, Support Services, West Hill, Winchester, and are to be returned by the 1st February, 1980, to the County Secretary's Office, Hampshire County Council, The Castle, Winchester.

**SOCIALIST PEOPLE'S LIBYAN ARAB JAMAHIRIYA**  
The Secretariat of Agricultural Reclamation and Land Development  
URGENTLY REQUIRE COMPUTER

The Water and Soil Department, Secretariat of Agricultural Reclamation and Land Development, Socialist People's Libyan Arab Jamahiriya, needs to purchase or lease a computer.

Installation to include range of equipment including a minimum of 32 users, fast and slow line printers, 3 high speed high density tape drivers and a tele type console.

*Full specifications*— obtained from the Information Department, The Libyan People's Bureau of the Socialist Libyan Arab Jamahiriya, 5 St. James Square, London, SW1.

Further enquiries from the Water and Soil Department, Secretariat of Agriculture and Land Development, P.O. Box No. 5332, Tripoli Telephone: Tripoli 41492, Telcx 20398 MIYN LY.

*Closing date*— Interested specialist companies should submit their offers before 20 January, 1980.

## COMMISSION AGENTS WANTED

Low cost data communications testers and accessories. Well established products with wide appeal. If you already sell on computer and would welcome a call from us.

Telephone 08-444 3281 Ext. 32 or answerphone 029-881 3848.

## FOR SALE A New MICRONOVA computer system

Wild Heerbrugg UK offer for sale a new MICRONOVA 9071-D computer system which is surplus to requirements. This system which has not been used has been completely checked by the manufacturer's UK agents.

The system comprises a MICRONOVA 9071-D computer with 32KW memory (8560, 8572, 3 x 8573), synchronous line interface 4207, console debug 4208, a 10Mb cartridge disc subsystem 6095, 6053 Dasher CRT display, DOS software and utilities + 12 slots available. The specification further includes single diskette subsystem 315Kbytes, a MICRONOVA communications controller board and a four line synchronous line multiplexer EIA RS 232-G CCITT V24 MA current loop.

The computer is complete with the usual accessories including a battery pack, a 60 cps dasher and a single bay cabinet. Software includes a DOS Fortran computer and DOS run time, etc.

Those interested should contact Mr. A. Devle, Sales Manager, MEDWAY (0634) 64471.

**Micros are undoubtedly having an impact. That much is obvious, not only to those of us who rely on computers for our daily bread, but to everybody.**

**Television runs programmes on the mighty micro, advertising hoarding wonder publicly whether we've had our chips yet, toyshops urge us to buy their micro-games for Christmas. But defining the real nature of that impact is another matter altogether...**

## Two views of 'revolution'

by Nicholas Enticknap

Research Machines' 3802 is typical of the small systems available for use in offices.

CANDIDLY, nobody has yet managed to predict exactly what effects the micro will have. If we take just one aspect, obvious but nonetheless a matter for pressing concern, how will employment be affected? For everybody who thinks that the date queue will shortly equal the size of the population, there are others who propound with equal conviction the view that employment will substantially increase.

Neither side of this argument

has really got to grips with the policies needed to manage the change to a micro-based society, despite the fact that both sides agree that considerable amount of disruption is inevitable.

The particular impact of the micro on the DPM is similarly the subject of a welter of different opinions. So, the reader might ask, what is the point of this article? Is it yet another piece of punditry by somebody who likes the sound of his own voice but doesn't have anything useful to say? Or is it, can it be, the answer to a prayer, a blueprint for the action the DPM needs to take?

While I hope it's not the first, I don't think it can be the second. What the DPM must do is for him to decide in the light of his own circumstances. What I can do is provide an assessment of the nature of the impact, and follow it with some suggestions for action, based on what's actually happening.

I'll start at square one by asking what impact the micro is making in general. Many commentators use the word "revolution" to describe it. Revolution is a strong word; it implies not just fundamental change but a great deal of unpleasantness — well, let's not use words — violence, in the process.

By no means everybody accepts that revolution is happening. At the BCS micro-processor specialist group conference on the impact of the micro on the DP professional, the contrary position was argued very forcefully and very persuasively by former BCS president Gerry Fisher in a talk addressing precisely this question of the impact of the micro on the DPM.

Fisher observed that he had been a DPM for nearly two decades. In that time the nature of his task, or of his responsibility to the organisation that employed him, had changed not one iota.

That task had been and still was to provide a data processing service to the organisation in the light of that organisation's corporate objectives, of which the most fundamental, he averred, was to make a profit. Seen in that light, the micro is merely another tool to do the job.

That of course is true, as far as it goes; what the argument overlooks, I would suggest, is that the nature of the tools available can change the nature of the job. The invention of the printing press, for example, made a drastic change to the nature of book production; the monks in their scriptorium were rapidly superseded by organisations we would now describe as publishers.

This point, in our current context, was well made by the speaker who followed Gerry Fisher at the same conference, Alex Hannam of Vickers. He argued that micros would be incorporated in all kinds of business aids, such as telex, facsimile transmission, clocking-in devices and the like, and that as they do so they would become, the computer manager's responsibility.

He even went so far as to say

that if the canteen manager were to come to the DPM complaining about the malfunctioning micro in his dishwater, he could do little to help, rather than treat the matter as very much not his pigeon.

The idea of the corporate DPM fixing the dishwasher is first sight rather bizarre; it certainly suggests as much of a distinction between the DPM now and in the future as between the publisher and the monk in the scriptorium.

Recognising this, Hannam suggested that the title be changed to reflect the difference of the job; his preferred new title was business service manager.

These are two strongly contrasting views of the same phenomenon by two observers.

It is clear that the DPM

needs to take a hard look at

what its relation would be to Fortran 77 if it were. Possibly it is now decided that there are no non-obsolete features of Fortran 77 which would not be in the core. Whatever the relationship to Fortran 77, it is likely that they will not be affected for some years.

However, in the long term it will add to the bare essentials, probably no larger than, but possibly more powerful than, the present Fortran 77 subset.

This would be a viable language in its own right, suitable for the expression of basic algorithms, for initial training and student exercises.

This places corresponding constraints on the syntax, especially considering the limited character set of Fortran.

It seems inevitable that there will be some increase in the character set, but the committee is anxious to keep this to a minimum.

It may be significant that X3J3 has before it, but has deferred consideration of a proposal to make blanks significant. Either that, or a large increase in the character set, would tend to make the new Fortran less Fortran-like.

It seems to me that a simple and more Fortran-like solution is to say that any modules (the O module and any extension modules attached directly to the core) should be mutually independent, thus freeing us from the need to ensure across-the-board consistency.

The Turin meeting heard a presentation by Wm Burke, the X3J3 member who is chairman of the group looking into this particular aspect, on the architecture of the new Fortran and the criteria for selection of items for the core.

People needing to use Fortran but who have experienced the advantages of the far superior control and data structure facilities in languages like Pascal and Algol 68 agitate for such features to be added to "drag Fortran kicking and screaming into the 1980s" as it is sometimes sarcastically called.

People building or wishing to use array processors want exciting features.

X3J3 were to set its collection of rules against such developments, all that would happen is that non-standard extensions in such directions would probably.

To cope with the need to preserve the investment in existing programs written in earlier versions of the language, the first module to add to the core C is the "obsolete module".

This contains features of Fortran past and present which in the opinion of the committee have been superseded by better features with equivalent functionality.

More difficult is the case where a programmer is trying to combine features of two modules in the same statement. It could perhaps be overcome by means of some prefix or suffix notation (which in practice would be rarely used if the "select module" feature were also provided) but would be better done by designing the module in such a way that this need not occur.

The core plus modules concept is essentially a hierarchical one, and there is no reason why further modules should not be attached to C+E or C+O, as well as just to the core.

The committee's intention is that no modules should attach to C+O for obvious reasons, but it envisages applications modules.

This seems now to have been discarded, at least for the time being, in favour of a single extension module E. C+E would constitute a complete language just as C+O would.

At present Burke's group is

particularly concentrating on

the design of the interface between C+E and the applications module.

After all, it is an ultimately thankless task since, whatever

## REPORT ON STANDARDS

# The long-term significance of Fortran update

BRIAN MEEK reports on the progress of Ansi's X3J3 committee which is considering revisions to the Fortran 77 standard. Meek, who is director of the computer unit at London University's Queen Elizabeth College, believes that the core plus modules project could be very significant for programmers in the future.

Scarecrow will not be first draft

THOUGH core plus modules and associated discussion of the requirements of application areas like real-time and database did tend to dominate the Turin meeting, other matters were discussed.

But it was argued that the facility does need to be within the language since otherwise only the expanded code, which may be difficult to read and maintain, can be transported.

Array handling was also discussed, with Hume claiming that constructs like:

A=A/A(I,J)

must for simplicity be regarded as representing implied DO loops (meaning that at some point A(I,J) changes itself to I, and all subsequent array elements are unchanged).

This was strongly attacked on the grounds that with array processors coming in we must start "thinking parallel" and add parallel features to the language, so that sequential constructs like the DO loop are used when sequencing is needed.

Macros would provide a simple method for introducing new control structures, with the danger for portability and readability that everyone would define their own, slightly differently.

Conditional compilation could aid portability by, for example, allowing variables to be REAL or DOUBLE PRECISION depending on the word length of the machine.

Macros were criticised on the grounds that they did nothing that preprocessors or external macro editors did not.

## 'Core plus modules' approach could lead to greater flexibility

WHAT the committee has embarked upon is an attempt to give to Fortran the kind of structure and architectural unit which it had never had, and a framework for future development.

Enthusiasts for reform will probably think that too few changes have occurred; X3J3 has always tried to keep a conservative line, as its chairman, Jeanne Adams, points out.

There would need to be special facilities to cope with two situations. One is when a programmer needs to use two independent modules in the same program unit.

This could be done by means of a non-executable statement telling the compiler what module to assume until further notice, the default being core.

This would mean that all Fortran 77 programs would need to be recompiled to use a core-plus-modules compiler, but that is an occupational hazard anyway even with a new version of the same compiler.

Successful experimental features added to the extension module will stay from revision to revision, or possibly move to the core, while unsuccessful ones will be transferred to the obsolete module. (There are obvious candidates for the obsolete module among the innovations of Fortran 77.)

It is even possible that features previously declared obsolete might be reactivated though it is expected that the module will gradually grow, with nothing disappearing altogether unless no voice is raised against its deletion.

As for the core, it is intended that this should remain as stable as possible from revision to revision, and change only slowly, if at all.

Core plus modules is not just an architecture for Fortran 8X, it is a plan to enable Fortran to meet changing needs over a much longer period.

The decision to try to take Fortran in this direction was a courageous one, and the committee should be admired for it — and for its subsequent application to the task — whether or not one is sympathetic to the aim.

After all, it is an ultimately thankless task since, whatever

form the new Fortran takes, it is bound to be wrong for somebody.

The committee may fail; but the intellectual and professional ability of those of its members I have met leads me to believe that, if so, the failure will not be in the technical quality of their work but in their ability to convince a sceptical and set-in-their-ways Fortran community that they have done the right thing. And, fail or succeed, it will have been a brave attempt.

## NOW'S THE TIME TO MAKE THE RIGHT CONNECTIONS

### Opportunities for Operators

#### ALWAYS RLY ON KNIGHTS FOR THE BEST MOVES

Jane Mugg is here to give advice and keep you in touch with a variety of permanent opportunities.

#### DATA CONTROL CLERK

Minimum one year's experience, pref. knowledge of large mainframe installation. Good prospects.

SALARY £4,800 p.a.

#### OPERATOR

Interesting opportunity for PDP op. Min. 1 year's experience. Good prospects + PERKS.

SALARY £8,000 neg.

#### SENIOR OPERATOR

Up to 20 years experience required OS/3 Pref. 2 years 2 shifts. Good prospects.

SALARY £15,000 + 12%.

#### OPERATOR

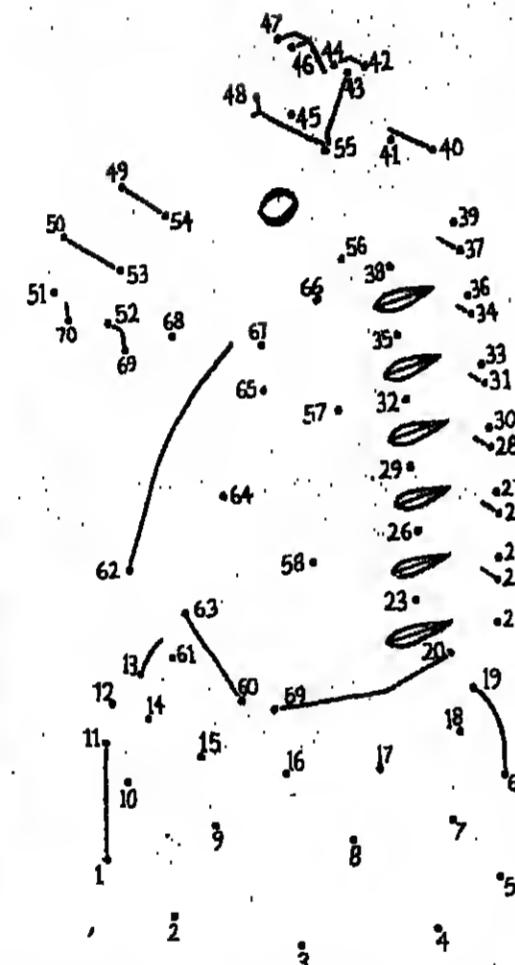

ICL 2904 installation under GII require an operator to work three shifts.

SALARY £6,750 under review.

#### TERMINAL OPERATOR

Experienced terminal op required to work 2-shift system. PDP op distinct advantage.

SALARY £4,500 p.a.

### Contracts for Programmers & Analysts

#### TOP CONTRACTS — TOP RATES

##### IMS COBOL / CDC Programmers and Analysts

To work in Holland

HOLLAND — Future contracts for a 12 month duration. Good DB or DC essential for development project.

KENT — Also very good first-time contract.

Initial 3 months duration. Easily commutable from Chelmsford.

The above requirements are current and future so if you are immediately available or on one month's notice call Neil Williams in Colne Cherry on 01-491 4706 (daytime) or 01-408 0290 (evenings).

#### HONEYWELL L62

Berkshire

Future contracts for Honeywell Cobol Programmers with experience in a small mainframe environment. Please contact Neil Williams or Richard Kulczyński for details.

## TELECOMMUNICATIONS SYSTEM DEVELOPMENT

£NEG

### TRAINEE PROGRAMMERS

### GRADUATE PROGRAMMERS

### SYSTEMS PROGRAMMERS

### SENIOR SOFTWARE PROGRAMMERS

Our client offers:

- ★ Advanced real-time telephone systems
- ★ Mini and Micro processor involvement
- ★ Application program design
- ★ Support Software development

If you can offer experience of one of the following:

- ★ Experience of a high level scientific language
- ★ Assembler level programming
- ★ Real-Time systems development experience
- ★ Process Control experience

The Company is a very successful member of an International Group-and the U.K. development centre based in the West Country liaises closely with development centres in Europe. The commencing salary which is negotiable is further enhanced by a wide range of company benefits including relocation expenses, discounts on group products and the opportunity for overseas travel. For further information on these challenging career opportunities contact our consultants:

# BORED WITH COMMERCIAL SYSTEMS?

## CHANGE TO REAL-TIME ENGINEERING APPLICATIONS

### N.W. SURREY

£4,500-£8,000

Due to the continued success of our client's operations, we are recruiting a range of computer personnel for a wide variety of development projects. The majority of systems are concerned with engineering, electronic or scientific applications on both mainframes and minis, with many projects utilising real-time facilities. Persons joining the company now can expect a most interesting and rewarding future in a high technology environment.

If you have one (or more) of the following:

- ★ AN ELECTRICAL ENGINEERING BACKGROUND
- ★ ASSEMBLER OR PL/I
- ★ DATABASE MANAGEMENT SYSTEMS
- ★ CRITICAL PATH ANALYSIS

our client can offer these positions:

- ★ PROGRAMMER
- ★ ANALYST/PROGRAMMER
- ★ SYSTEM SUPPORT PROGRAMMER

- ★ CDC OR IBM MAINFRAMES
- ★ REAL-TIME APPLICATIONS
- ★ QUALITY ASSURANCE
- ★ MINI COMPUTER EXPERIENCE

- ★ SOFTWARE AUTHOR
- ★ SYSTEMS PROGRAMMER
- ★ SOFTWARE ENGINEER

Salaries will be commensurate with experience but should not prove a problem to persons wishing to join the company. Located not far from the M3, the modern offices are well serviced by three British Rail stations and there is a large car-park next to the building.

# professionals seeking professionals

LOCATION—LONDON

OUR CLIENT, MORGAN GUARANTY TRUST COMPANY of NEW YORK, a major international bank, is seeking an experienced Project Manager to assist in the implementation of computer applications policy for the 1980's in its London Office. COMPUTER SYSTEMS are central to the bank's operations and important systems are being installed as the first phase of a long range development plan. The bank is now planning the second phase to include real-time foreign exchange processing, automated money transfer and creation of on-line communications links with its customers. IBM mainframes are used for the bank's main transaction systems, with distributed processing as appropriate. THE PROJECT MANAGER'S duties will include the planning, budgeting and control of all projects in a business applications area, as well as providing user liaison at senior management level. The successful applicant should have the following attributes (in order of importance):—

## PROJECT MANAGER BANKING

from  
**£10,000 p.a.**  
plus valuable benefits

- \* 5-7 years project management experience
- \* Good communications skills, verbal and written
- \* Experience with international or merchant banking systems, including exposure to user areas
- \* Experience in developing on-line transaction-based systems, together with batch counterparts

THE COMPUTER SYSTEMS DEPARTMENT is located in Morgan House, a prestigious 14-storey block in Stratford — 15 minutes from Liverpool Street Station (Tube or British Rail).

IN ADDITION to the basic salary, the bank offers low interest mortgage facilities, non-contributory pension, medical and life insurance plans, an annual bonus, interest free season ticket loan, subsidised restaurant and relocation assistance where necessary.

## Exceptional opportunities with an exceptional bank.

APPLY NOW by telephoning George Searl on 01-638 0036 or by sending a brief C.V. to DILOG LIMITED, Ref C280, Throgmorton House, 15 Copthall Avenue, London EC2M 5TP.

## PROJECT MANAGERS EARNINGS RANGE £9k to £11k CENTRAL LONDON

- ★ MAJOR INSTALLATION
- ★ LARGE MAINFRAME AND MINIS
- ★ WORLDWIDE NETWORK
- ★ DB/DC, DISTRIBUTED PROCESSING

Our client offers an unrivalled opportunity for experienced and aspiring Project Managers to test their mettle on a range of very challenging assignments that encompass the development of a large, trans-continental network system during the early 1980s.

Most important aspects are proven commercial experience coupled with strong management skills. Career prospects are excellent with a company deeply committed to computing. If you feel ready to contribute to 'state of the art' technology then contact us for more details. The advising consultant is JACK COLLINGS who can be reached during the day on 0273-833848 or after 7 p.m. any evening (including weekends) on 0273-400880. If you prefer send him your C.V.

INTERVIEWS CAN BE ARRANGED DURING EVENINGS OR WEEKENDS

## REAL-TIME DEVELOPMENT

### BYTE COBOL—TRAIN AS ANALYST/PROGRAMMERS BYTE ASSEMBLER—TRAIN IN SOFTWARE SUPPORT

N. LONDON

to £6500

This small but sophisticated installation is expanding in on-line/real-time developments and distributed processing is planned. Local and remote terminals are currently on-line to the mainframe computer and a larger terminal network is being designed.

COBOL PROGRAMMERS and ANALYST/PROGRAMMERS are required to assist in the development of Production Planning/Control Projects and there is good scope for advancement.

ASSEMBLER PROGRAMMERS are required to become involved in Software Support for the installation.

Telephone Peter Benson on 01-839 6087 for further information.

## Analyst/Programmers

London  
W1

c. £8000  
+Benefits

Our client, a leading manufacturer in the fashion industry, is seeking to strengthen its DP team by two additional analyst/programmers. The installation is an IBM 370 running under DOS/VS with database and data communications techniques being used extensively. The successful candidates must have had a minimum of three years programming experience, one year of which must be in COBOL. They must also have participated in the design of at least one system and be able to communicate effectively both orally and in writing. The ability to work with a minimum of supervision and to pursue problems through to a successful conclusion is essential. These positions present an excellent opportunity for gaining in-depth DB/DC experience together with considerable scope for career progression. Benefits include season ticket loans, subsidised restaurant and company products at substantial discounts. If you feel you can match these requirements, telephone or write in confidence to RON BURRELL quoting ref. 307K.

# COME INTO THE 1980's WITH A LARGE MULTINATIONAL COMPANY

DILOG'S CLIENT is developing a major international distributed-processing system, based on substantial IBM and DEC equipment sited in the U.K. and Western Europe. A number of Systems Analyst and Senior Programmer positions exist within the project teams, as shown below. Our client is more interested in the quality and depth of your experience — the projects are large, and allow flexibility of initial placement within the teams.

BENEFITS are substantial: Excellent pension scheme, free life assurance, 4-5 weeks holiday, subsidised licensed restaurant and flexible working hours.

Management training is carried out as part of Company policy, and some opportunities for European travel exist.

LOCATION MIDDLESEX (10 seconds from Underground)

## SYSTEMS ANALYSTS

Experienced analysts with technical awareness are required for both IBM and DEC-based applications. Large scale project exposure an advantage.

£8250

## SENIOR COBOL PROGRAMMERS IBM OS/VS

Structured programming experience (especially JSP) is desirable. ROSCOE, PANVALET and JSP-COBOL are used for development.

£8250

## SENIOR BASIC PROGRAMMERS DEC RSTS-E

Good commercial experience is sought, with exposure to BASIC - 2

£8250

## IBM OS/VS JCL WRITER

Experience must be current. You are likely to have an operations background. Subsequent programming work is a possibility.

£5300

## A COMPUTER WEEKLY HANDBOOK

# BASIC FILE DESIGN

BY OWEN HANSON

This book provides a brief but authoritative review of the most frequently used file organisation techniques, and of related subjects such as data security and software aids.

The file designer is shown how to choose between the available techniques on the basis of known or forecast information rather than rule-of-thumb, and methods of ensuring that the correct choice has been made are given.

New work carried out by the systems analysis division of the City University Business School, London, is linked with previously published information to provide methods of optimising the performance of sequential, direct and indexed files. Marked improvements can be achieved, particularly with direct files, which are worthy of wider use than at present.

Students of data processing, lecturers and practitioners should all find the book invaluable, particularly because it provides a great deal of information and many illustrations in a very compact format.

**£1.50 including postage. Rates for bulk orders on request**

Available from

General Sales Department, IPC Electrical/Electronic Press Ltd., Dorset House, Stamford Street, London SE1 9LU

## COMMUNICATIONS SYSTEMS PROGRAMMERS

to £7K (Comparability Award Pending)

### The Opportunity of a Lifetime

Do you want the opportunity to play a central role in developing real-time data base applications that would place the City of Kingston upon Hull at the forefront of other Councils in the U.K.?

The Council have embarked upon a major development programme involving implementation of a highly advanced and fully comprehensive On-Line Housing Management System based on ICL 1900 Series Processor operating under COMMUNICATIONS MANAGER. The system will provide unrivalled service to people in housing need and meet all the needs imperative to effective housing management services.

Our current equipment is an ICL 1903 (128K) with 8 x EDS 805 etc. and communications hardware and is likely to be enhanced in the near future. Our most important growth area is in the communications field and we utilise the latest technology and techniques to meet the challenges and demands of the future. To do this we require top line

In appropriate cases the cost of removal plus other generous relocation expenses will be paid and temporary housing accommodation may be available. We have two vacancies: Post No: TC 249 PO1 (1-S) and TC 251 (T1-SOI).

Application forms returnable by 25th February 1980 and further information may be obtained from The Chief Personnel Officer, Municipal Offices, George Street, Hull.

## Real-Time Mini & Micro

Are you currently involved in Message Switching, Communications, Military Systems, Modelling or Simulation? If you can offer sound experience in any of those fields plus a hardware background encompassing either PDP11, Data General, Intel 8080, Zilog Z80, or M6800, with knowledge of Assembler and at least one high-level language (eg CORAL 66, Pascal or Fortran), you should be ideally suited for a position with this leading Systems and Software House. Based in Central Southern England, our Client has several UK offices, so whether your choice of location is North or South we are sure they will be able to accommodate you. Superb career opportunities and promotion

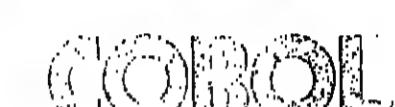

£6.5-10.5K

## North Sussex

A major redevelopment of the computer facilities run by this International Manufacturing Organisation has created openings for a Systems Analyst (2-3 years experience), a Chief Programmer (1-2 years man management experience, COBOL, ICL 1900 preferred) and several more Junior Programmers (2 years experience, COBOL and business BASIC). Excellent benefits including car scheme, flexitime etc.

## Sales Manager

Young and ambitious Sales Executive required by this dynamic, London-based Software House. Experience of selling hardware is essential, previous involvement with financial and production control systems packages an additional advantage. Responsibilities will be many and varied, but the rewards are excellent.

## UK and European Opportunities

One of the acknowledged market leaders in high-level systems and software development is entering a new expansion phase creating exciting opportunities in the UK and at various European centres. A challenging opportunity now arises for COBOL Programmers with 2 or more years experience on any major manufacturers' mainframes to join one of several project teams engaged in a wide variety of commercial and financial on-line and batch applications.

You will be expected to have a sound knowledge of your respective operating system, and every opportunity will be available to enhance your present skills and to make a valuable contribution to the successful International Group. Promotion is mainly from within and therefore a well defined career path into management and project leadership positions is established. Our Client is reputed to be amongst the highest remunerators in the industry in addition to which they provide excellent pension, life assurance and equity participation schemes, frequent cost-of-living reviews, "out-of-pocket" expenses and, above all, a choice of motivating projects to work on. Interviews will be held during the first three weeks of February and firm offers will be made without any of those usual annoying delays. Expect to talk in the range:

£6.5-8.5K (UK), £13.5-16K (Europe)

## Design Manager

A unique opportunity to combine your in-depth technical expertise with management responsibilities is offered by this internationally renowned supplier of computer-based Process Control and Automation Systems at their Hertfordshire headquarters. As Design Manager, reporting at board level, you will be responsible for a team of technical specialists developing system software such as Compilers, Operating Systems, Linkers, Editors and Assemblers on DEC hardware. You will be influencing the future success of the Company by identifying new development areas, and producing new software packages which will ensure that our Clients maintain their market leadership in the process control systems field. It is unlikely that candidates with less than 6 years experience in software development will be qualified for this challenging and demanding role. The benefits offered are substantial, including free life assurance, pension schemes, flexitime and generous relocation assistance where necessary.

£9.5-11K

## Sales Support

Consultancy posts with this major UK Bureau are currently being offered to DP professionals with a broad commercial background, to support sales of MVS services. Analysis and proposal writing involved, City base.

## Holland

Systems Designers and Technicians required for a Data Communications System, background should include computer networks based on Packet Switching. Machine experience on PDP or Philips minis. £8.5 + car to £15K

## Eng. Support

Product Engineer with some hardware experience in electro-mechanical systems and micro required to set up Engineering Support Function for our North London Client's prestigious products. £8K + car

10 Grenville Place

London SW7 4RW

01 373 3063

## Telecommunications and Product Engineering Manager

Our Bibliographic Services Division provides large scale on-line and batch services to its users, both within the UK and, increasingly, in Europe.

The responsibilities of the Telecommunications and Product Engineering Manager include the planning and establishment of effective telecoms network facilities for these services; and training and advice to users on the selection, installation and use of terminals and other electronic equipment.

Candidates must have a suitable qualification in Electrical and Electronic Engineering and have

had formal training in telecoms and GPO DATEL services. Experience in the planning and maintenance of a large scale data communications network is essential, as is the ability to manage staff with a variety of expert skills. Experience in any of the following would be an advantage: DICICO equipment, teletype terminals, ICL and IBM communications hardware and protocols, Systems Reliability, Equipment, GPO DATEL service ordering and approvals, International Interface standards.

The post is graded SEO and attracts a salary of £8,130-£9,680, including Inner London weighting. For further details and an application form (which must be returned by 22 February 1980) please phone Ceila Woodall on 01-638 1544 ext 518 or 01-308 1570.

BC The British Library

## ANALYST PROGRAMMERS/PROGRAMMERS

Fulham

up to £8577

Opportunities exist within the British Gas Headquarter's Computer Services Department, following the recent expansion of the Department, for Analyst Programmers and Programmers to join project teams in the following areas: Systems Support—providing a maintenance and development function for a mainframe computers (ICL 2972 Univac 1100/21); Microcomputer Projects—for a variety of projects involving evaluation and development of microsystems.

Database—to specialise in the use of modern high level database languages and techniques. Compumetrics—to work on all aspects of computer performance evaluation using hardware and software aids.

Applicants should have between 1 and 3 years relevant experience and preferably a degree level qualification.

The department is located at Fulham where a new purpose-built building, to house the department, is currently under construction.

Appointments will be made within the range £3745-£8577 according to qualifications and experience. Salaries quoted are inclusive of Inner London Weighting Allowance. In addition there are the benefits normally associated with a large progressive organisation.

Please write with full details of age, qualifications, experience and current salary, quoting reference EP/784002/CW to the Senior Personnel Officer (London), British Gas, 58 Bryanston Street, London W1A 2AZ. Closing date for applications, 18th February, 1980.

## Financial Services Department Programmer/Analyst

£3379-£6708

Following internal promotion we have a vacancy for PROGRAMMER/ANALYST based in our Computer Section at the Town Cantra, Harlow. The Council operates a 49K ICL 2904 with EO5 80 and magnetic tape together with a communications systems comprising of some twenty terminals based upon ICL 7502 and Philips PTS 6000 equipment with plans for further enhancement. Applicants should possess a minimum of two years' overall computer experience preferably on ICL machines using COBOL.

A flexible scheme is in operation. Housing may be available, full removal expenses paid, travelling expenses, lodger allowance, legal and relocation expenses available in appropriate cases. Sports and Social Club.

Application forms and job description are available from the General Manager's Department, Harlow Council, 17 Adams House, The High, Harlow, Essex, CM20 1ED. Telephone Harlow 2682, Ext. 85. Closing date: 16th February 1980.

HARLOW

computel

## Senior Sales Executives

c. £12,750 + car

Located in Berkshire, Computel is one of the largest telecommunications based service bureaux in Europe. It is also one of the fastest growing companies in any sector of the computing industry with an annual rate of growth in excess of 50% per year.

To sustain this growth the company is seeking to recruit several senior sales executives. Ideal applicants will have experience, preferably gained in bureau services, a record of success and the ability to obtain new business and develop existing accounts.

These are senior positions within the company and it is unlikely that anyone with less than three years successful sales experience will be suitable. The remuneration package is high with a BASIC SALARY OF £8,500, a company car, and a commission scheme with a guarantee period and no ceiling on earnings. This is a real opportunity to join one of the most successful computing services companies in the UK. For further information telephone

Kevin McCourt or write with brief details quoting reference 3077. All applications will be acknowledged and treated in the strictest confidence.

MYRIAD

## PROGRAMMING MANAGER

N.W. OF LONDON

£11,000 + CAR

This senior position has recently been created due to the continued expansion of our clients operations in the U.K. The Programming Manager will direct small development teams producing a range of technically advanced software products on IBM equipment and will contribute to the design of future systems in addition to identifying improvement potential in existing software.

Candidates for this challenging role should have a strong data processing background and proven experience of supervising programming staff. IBM Assembler knowledge is essential and therefore SYSTEMS PROGRAMMERS, seeking a career advancement, will qualify for this role.

The successful applicant will possess a genuine interest in software development, coupled with the drive and personality to manage a fast growing department.

A generous starting salary is further enhanced by a full range of employee benefits, including full relocation expenses where appropriate and the spacious new offices have ample car-parking facilities and are also well serviced by public transport.

30 Fleet London EC4Y 1AA Telephone 01-353 0981 24 hours

During the latter half of the 19th Century the introduction of iron-hulled steamships gave forward thinking companies a significant improvement in efficiency over their competitors in overseas trade.

During the latter half of the 20th Century this forward thinking Company is hoping that the introduction of computerisation will do the same thing.

#### DATA PROCESSING MANAGER

WEST COUNTRY £ salary negotiable

A leading clothing manufacturer, committed to an expansion programme, currently using SYSTEM 34 with remote terminals, requires Data Processing Manager.

The successful applicant should have a solid background of systems analysis, at least 3 years RPG II programming, a good working knowledge of IBM GSD equipment and sound managerial experience.

Reporting to the Financial Director, the D.P. Manager will play an important role in the development of the company's systems. Computer applications will include Sales Invoicing, Stock Control, Cost and Financial Accounting, Payroll and Production Control.

A generous salary will be offered commensurate with the experience of this position and the previous experience of the applicant, together with the other benefits of working for a progressive public company.

Applications in writing with C.V.  
 should be made to:  
 L. J. Baldwin FCA,  
 Clares Carlton Limited,  
 Wells, Somerset BA5 1SQ.

#### PRIME AUSTRALIA

Prime Computer of Australia Limited would like to discuss the potential employment of Hardware/Software Engineers for Sydney, Melbourne and Perth.

ADVANTAGES

- \*\* Package salary
- \*\* Team
- \*\* Working conditions
- \*\* Potential advancement

# MANAGEMENT & EXECUTIVE SELECTION

## COMPUTER ENGINEERS & ENGINEERING MANAGERS

MES welcome a Senior Computer Engineer to their Computer Engineering Division

Howard Wynne will be using his considerable experience of the industry to Advise and Assist Computer Engineers with their Career Development and Managers with their Recruitment

So whether you need advice, a new job, or people, call Howard today!

**MIDLANDS, NORTH, SCOTLAND & WALES — HOWARD WYNNE, Senior Consultant C.E.D.**

Suite 201/6 Albany House 324 Regent Street London W1R 5AA 01-637 9611

LONDON AND SOUTHERN ENGLAND —

PETER GORTON, Manager C.E.D.

MANAGEMENT & EXECUTIVE SELECTION

Ladybird

### PROGRAMMER

Langley, Berkshire, to £7,500

We are looking for an experienced Programmer to play a vital role within our team.

Ideally applicants will have 2-3 years' sound programming experience, using both low and high level languages. Experience in IBM hardware would be useful, but we would like to meet any applicants who feel their ability and potential would interest us.

The post offers a first-class opportunity for real involvement in a small but progressive department. The past two years have seen the introduction of OL 1, CICS and on-line programming languages. If you feel you could make a significant contribution, we would like to hear from you.

For further details please telephone:  
Personal Officer  
LADYBIRD LTD., Slough, 44111

### TECHNICAL OFFICER (COMPUTER APPLICATIONS)

### Applied Physics Division

#### MATHEMATICS SECTION

The successful candidate will join a team in the Mathematics Section whose work covers a range of research areas in addition to providing a mathematical service within CERL. He/she will work closely with Research Officers engaged on a number of problems for which numerical and computational solution plays a large and important role. In addition he/she would contribute to the mathematical and computational service provided by the Section.

Applicants should ideally possess an HNC or equivalent qualification and at least two years' experience of computer programming. The duties of the post require ideally a good understanding of mathematics and numerical analysis, together with a knowledge of a range of computer languages and modern programming techniques.

The appointment will be made within a salary range of £5200-£7800.

The laboratories are situated in a pleasant part of Surrey and offer attractive conditions of service, and facilities for the total of 800 Research and Support Staff engaged in a broad spectrum of research into the materials, technologies and plant performance problems of the Central Electricity Generating Board.

Application forms are obtainable from the Head of Personnel Development & Services, Central Electricity Research Laboratories, Kelvin Avenue,

Loftus Road, Surrey KT22 7SE or telephone Leatherhead 74488 Ext. 363,

quoting reference number RL/1/80/N8. Closing date is: Friday 15th February 1980.

SOFTWARE HOUSE  
TURNOVER 85,000,000 F 370 PERSONS  
Partner of an international industrial group,  
is looking for

### Analysts-Programmers

with a University degree or equivalent computing degree and 5 years or more professional experience for requirements analysis and for the design and implementation of a banking information system.

Applicants must be bilingual French-English.

The work is in the Middle-East area with frequent visits to Paris.

Candidates with competence in administrative organization will be preferentially selected.

Basic salary in Paris.

Letter, C.V., photograph and salary requirements should be addressed to N. 3020 - F 370 SERVICES RECRUITMENT - 112, Bd Voltaire - 75011 Paris

## DATA CONTROL SUPERVISOR

We have a vacancy in our Computer Department for an experienced Data Control Supervisor. This person will liaise with each department to ensure an efficient flow of work, and will be responsible for collating the documents required by the computer and control of output through the Computer system control books. This entails both the issue and publication ledger, management of customer files, stock control and supervision of data processing work. This is a responsible position and requires someone who is conscientious, accurate, and has a general accountancy background, as the Company's financial information is also managed through this department. Salary £5,000-£5,500 depending on age and experience. Please apply in writing to: Mrs. M. Duckham, Telfisher Brothers Limited, 50-52 Tooley Street, London EC1 2GT.

## Programmers

The Rutherford Laboratory's Computing Division supports scientific research in the Laboratory and at universities. Facilities include dual 360/1956, 3032, PRIME 400, GEC 1070 and VAX 11/780 computers with a large network of workstations in University Departments.

Research supported includes CAD, electron beam lithography for silicon fabrication, lasers, astrophysics, space research, nuclear physics and computer science.

Career opportunities exist for graduates with a good degree and an interest in computing in the following areas.

### Systems Programmers for IBM, VAX, PRIME and GEC.

### Applications Programmers to work in the area of CAD.

### Support Staff To assist a user community of over 2000.

These posts offer excellent prospects for candidates with the right qualifications and experience.

Salaries range from about £3,500 to £7,000, depending on age, qualifications and experience, and will be awarded in the grades of Scientific Officer, Higher Scientific Officer and Research Associate.

The Laboratory has its own restaurant and sports facilities nearby. We offer excellent working conditions including a local transport service, generous holidays, sick leave allowance and non-contributory superannuation scheme.

For an application form, please write to:  
**Mrs Jane Williams, Personnel Group, Rutherford & Appleton Laboratories, Chilton, Didcot, OXON OX11 0QX, quoting Ref. VN 882 or 'phone 0235-21900 Ext. 510.**  
Closing date: February 15th 1980.

**LIVERPOOL PROGRAMMER** up to £5,500  
Our client has an opening for a 2 years experienced COBOL programmer to work on a wide range of commercial applications. Hardware is ICL 2903

**NORTH MANCHESTER SENIOR SYSTEMS ANALYST**  
**SYSTEMS ANALYST** up to £7,500

Our client is looking for experienced analysts, with a programming background in COBOL, to work on production control applications. ICL background an advantage. Good prospects with a progressive manufacturing company.

**DERSYSHIRE SENIOR SYSTEMS ANALYSTS** £ Neg.

A major IBM user currently seeks two additional senior systems analysts to work on-line manufacturing applications. Applicants should have gained 3-4 years general analysis experience. In addition to an excellent salary, the successful candidate will be offered involvement on latest data-base techniques.

**DERSYSHIRE SENIOR PROGRAMMER** This multi-machine environment requires an additional senior programmer who has gained around 3 years experience to work on-line manufacturing systems, batch processing and data-base applications.

**NORTH MANCHESTER COBOL PROGRAMMER** £ Neg.  
Our client is looking for a COBOL programmer with around 2 years experience to work on-line manufacturing systems, batch processing and data-base applications.

**MANCHESTER ANALYSTS** £ Neg.

Combine 2 years experience together with COBOL and/or PL/I, our client would be interested in a quick or permanent placement.

### Microprocessors at Swansea

The University College is seeking experienced personnel to staff the recently established Microprocessor Centre, which is responsible for providing a service to users in the College and in industry.

Applicants should have an appropriate degree or equivalent professional qualifications, and should be able to demonstrate experience with microprocessors in any relevant field.

The three vacancies are as follows:

**Microprocessor Centre Manager**  
(Salary £7,860-£9,881 increasing to £8,472-£10,484 on 1 April 1980). To be responsible for the day-to-day operation of the Centre and for liaison with users.

**Microprocessor Systems Engineer**  
(Salary £4,768-£8,273 increasing to £5,082-£8,789 on 1 April 1980). To work on system design and application, with a software bias.

**Research Demonstrator**  
(Salary up to £8,401 per annum increasing to £8,725 per annum on 1 April 1980 for applicants aged 26). To work in the Department of Electrical and Electronic Engineering in collaboration with the Centre to demonstrate microprocessor courses. The appointment is for one year in the first instance, renewable annually for up to a further two years.

Application forms (2 copies) and further particulars may be obtained from the Personnel Officer, University College of Swansea, University Road, Swansea SA2 8PP. Closing date for applications is Friday 22 February 1980.

## SYSTEMS ANALYST

**THE COMPANY**  
Anglo Swedish Equipment, one of the major distributors of forestry and construction equipment in the U.K.

**THE PRODUCT**  
Manufactured by Volvo BM, a division of Scania's biggest engineering concern, Europe's largest producers of wheeled loaders.

**THE JOB**  
To design and implement interactive systems for our POP 11/70 Accounting ledger, payroll and word processing are already in operation. During 1980 most of our efforts will be directed towards order processing and stock control.

**THE PERSON**  
Must have at least 3 years' experience of successful systems analysis/design and implementation, as well as being both articulate and capable of playing a constructive role in the D.P. Department.

Please TELEPHONE MR. M. GRAVES FOR FURTHER DETAILS AND AN APPLICATION FORM OR WRITE TO:

Anglo Swedish Equipment Ltd.  
P.O. Box 2, Great Yeldham,  
Hertfordshire, SG5 4ET  
Telephone: 01 2377815

TRANSPORTATION  
IN STAFFORDSHIRE

### SYSTEMS ANALYST/ COMPUTER PROGRAMMER

TRANSPORTATION PLANNING  
POST NO. 3002088  
SALARY GRADE 80.1/80.2 (£6,721-£8,827)

Applications are invited from suitably qualified and experienced persons for the above post in the County Transportation Unit.

The County operates an IBM 370/148 system using VME/CMS, and there is a remote VDU situated in the County Planning Department for Transportation planning use.

The successful applicant (m/f) will be expected to control the use of, and to maintain and further develop computer programs for transportation planning. Preference will, however, be given to applicants who have a knowledge of transportation planning systems. An ability to program in Fortran is essential.

Applications, giving full particulars of age, experience, qualifications and present appointment, including existing salary together with the names and addresses of two referees should reach the County Planning Officer, Martin Street, Stafford ST16 2LE, by 18th February, 1980. Relationship to any member or Senior Officer of the County Council must be disclosed.

### Young Analyst has commercial bent!

Birmingham c. £7500

My client is developing an approach to systems which incorporates the technical fitness gained from the discipline of working in a computer environment combined with commercial acumen and flair.

Your brief will be that of troubleshooter including converting line manager to D.P., and developing an organic approach to systems design in a commercial organisation.

Aged in your twenties your experience could be gained from many areas but you tell me if you think you are the analyst for the job.

Telephone Peter Humphreys on Bristol (0272) 213151 or write to Harrison Cowley Executive Selection, 35 Queens Square, Bristol BS1 4NG.

PENNINE DIVISION

### Chief Technical Assistant (Systems)

Salary: £6,003 - £8,426 p.a.

Based at Middleton, you will be responsible to the Assistant Divisional Finance Officer (Technical) for the supervision of the day-to-day operations of the Data Processing Section of the Division.

You will liaise with Head Office Computer Services staff on implementation, operation and development of financial and non-financial systems. You should have appropriate educational qualifications and have either a programming, systems or computer operations background.

Applicants' forms from: Personnel Officer, North West Water, Pennine Division, London House, Oldham Road, Middleton, Manchester, M24 1BD.

Closing date for applications: 15th February 1980.  
The above Post is open to both men and women.

### Consultants, Analysts and Programmers

In a business where everyone offers  
you something similar,  
**CMG offers you something more...**

### Opportunity!

By that we mean the opportunity to earn more than most, the opportunity to attain greater job satisfaction and the opportunity to develop your skills and career with the computer services company that has become the largest in Western Europe, and is still growing fast.

Make no mistake, to join us you have to be good at your job and if you are the right person you will have at least 2 years practical experience of systems and programming and be positively looking for a career! All promotions at CMG are from within the company.

You should have a prime interest in developing systems and solving business problems. Flexibility is also necessary, because we do not separate programming, systems work or consultancy, we use each person's particular skills to the full.

All staff are expected to participate fully in the development of the company, which means that we invite you to help us, in an informal atmosphere, to make the right decisions.

Currently we can offer career opportunities at our offices in the West End, Croydon, Greenford and our Banking Services office in EC2, but you

could find yourself working for clients nationwide or abroad.  
**Vacancies exist at both junior and senior levels, with salaries ranging from £6,000 to £15,000 and excellent benefits which include:**

- ★ Top salaries
- ★ Share purchase scheme
- ★ Free medical insurance
- ★ Free life assurance
- ★ Free pension
- ★ Profit share
- ★ Assistance with relocation (where necessary)

### REAL-TIME SOFTWARE

Salary Package to £12,000

Paramin U.K. Ltd. is the highly successful subsidiary of an American Software engineering Company.

We are now in the process of establishing our second U.K. office in the north of London and consequently we have a requirement for professional staff who live within a 30 mile radius of either Staines, Middlesex, or Stevenage, Hertfordshire.

Ideally candidates will have a science or mathematical degree and experience in one or more of the following:

- Rationalisation
- Flight simulation
- Telnet/VT100 - Signal processing
- Process control
- AI etc.
- Robotics
- Voice communication
- Operating systems
- Compilers
- Graphics

In return we can offer the opportunity to become involved with a dynamic young Real-time Software engineering company, where employees are recognised as individuals and rewarded accordingly.

Should you wish to find out more about the company and the facilities on Staines 0895 591011 between 0900 and 1300

PARAMIN UK LTD.

Victor House, Nonis Road, Staines, Middlesex  
TW18 4DS

### CLASSIFIED COPY

All classified copy should reach our offices no later than 9.30 p.m. on the Monday preceding Thursday's publication.

If complete artwork is supplied, 11 a.m. on a Tuesday.  
Ring Ray Kelly for further details on 01-261 8016.

### The best jobs are not always in the biggest adverts

We are acting for clients (CENTRAL LONDON mainframe installation), who offer experienced PROGRAMMERS the following advantages:

- Plenty of DEVELOPMENT WORK
- TRAINING in modern techniques, including Database and Communications
- JOB INTEREST — advanced; technically challenging projects, in a well-organised installation
- Good ENVIRONMENT — handy for tubes, shops, theatres, etc.
- Excellent EARNINGS in the £6000 to £8000 bracket, the latter involving Team Leadership

You should have had at least 1½ years' practical programming experience, ideally COBOL, but if you have used other languages our clients will be happy to retrain you. If you are considering a serious career move, please ring (quoting ref. 836) and arrange to call to see us.

**EDP SYSTEMS 01-637 5796**  
52-53 Margaret St, London WIN 7FF

### HOW TO GET UP THE LADDER IN ONE STEP

This is a unique opportunity to get in on the ground floor of an exciting new operation. Our client is a leading American software products company. They are now expanding, by opening a wholly-owned subsidiary in the UK.

### Sales Support £8-12,000

The technical support you give to our sales team is vital. The key roles will involve a good understanding of software on IBM and mini-computer computers.

The total range of products will cover systems software packages (including TP monitors and databases) and financial modelling systems. Your involvement will range from technical presentations right through to installation, training staff onto the new system, and providing on-going after-sales support.

The company is located in North Herts. Although you should be willing to undergo initial training in the States or Europe.

In both capacities, an executive car will be provided — and you can expect all the benefits of working with a major company — including help with finding a flat and a car.

There's never been a better chance to make the most of your talents. If you're looking for a brighter future, call us to arrange a meeting on Welwyn '1043-871 7007.'

Sofisport, PKB Advertising Ltd., 1 Mardley Hill, Welwyn, Herts.  
Tel: Welwyn 7007

### Software Product Sales £15,000

As a Regional Sales Manager, you'll be already established within the industry, with a background of software products or services.

Your sales expertise should be supported by the technical knowledge to develop new markets — and the contacts to bring in new ranges of products to the UK, which have already proved highly successful throughout the rest of the world.

To enable you to gain a good insight into these products your income will be guaranteed during your first year.

For further details, please contact:  
Roger Allington, quoting Ref. FL20

# SHIFT SUPERVISOR

ICL 2960 LUTON c. £5800

Laporte Industries require a Shift Supervisor to lead shift team who will operate their ICL 2960 running under DME.

This is a responsible position reporting to the Operations Manager. In addition to team leadership the Supervisor will be able to control and schedule the computer.

Candidates should possess four years' ICL G2/G3 experience, two of which have been in a supervisory role. A knowledge of data control procedures would be an advantage.

Conditions of employment include four weeks' annual holiday, non-contributory pension fund and generous assistance with expenses if relocation is necessary.

Applications, in writing, to Group Personnel Manager, Laporte Industries Limited, PO Box 8, Kingsway, Luton, Beds., or telephone John Cox, Luton 21212 ext. 2167 for further details.

**LAPORTE INDUSTRIES LIMITED**  
PO Box 8, Kingsway, Luton, Beds. LU4 8EW

# MVS Support

Holland £20,000+ p.a.

We are seeking two Systems Programmers to join two of our Software Consultants based in the Netherlands. The first is working on major system upgrades and maintenance for an expanding MVS Data Centre equipped with an 8M AMPHAL/V7 and a 5M 370/68. The second is responsible for the implementation and maintenance of MVS for a 3M 3031 and VM/VS for a 4341. Although a knowledge of MVS is desirable, System Programmers with experience of TSO, VTAM or VSAM are also invited to apply. Employment is on a six-monthly renewable contract basis with an anticipated project duration of between one and two years.

For further details, please telephone or write to Brian Bidston at CDS of call during evenings/weekends on 03446 6385

## Born to lead in Computer Software and Communications in the Eighties

### The New Company

### with a Worldwide Pedigree

IAL Gemini is a new company formed by Cap Gemini Sogel— the largest software group in Europe—and IAL— perhaps better known as International Aerofit Ltd., the British owned market leader in aviation and communications systems. IAL Gemini plan to expand their existing customer base which comprises the major commercial and industrial clients of Gemini Computer Systems Ltd in the UK. Cap Gemini Sogel clients in Europe, and IAL customers in the UK, North America and throughout the world. IAL Gemini employs 150 staff from offices in London (moving to offices in West London)

and Manchester, IALtrinham, and will have a turnover in 1980 of more than £2 1/2 million. Opportunities exist in the new company for all levels of experienced computer professionals to work in house, and on client-based projects in all spheres of computer software and communications development, including the specific requirements outlined in this advertisement. Benefits include a realistic commencing salary, six monthly salary reviews, individual profit-based bonus scheme, paid quarterly, pension scheme, life assurance and retirement benefits.

**IAL GEMINI**

### 1. Command and Control Systems

Experienced programmers analysts interested in working on real-time computer systems based on Data General hardware. Should have a knowledge of real-time operating systems and Fortran or Cobol on a mini/micro-computer. Project work, in-house, in West London. With opportunity to travel in the UK and North America. London. Contact A.

### 2. Micro Software Analysts and Programmers

IAL Gemini are working with Data 100 to develop and install a range of commercial software packages based on the successful Sycon 400 range of mini/micro-computers. Experienced Programmers and Analysts with a good knowledge of commercial systems and experience in COBOL are required for software development, support, installation and customer training in the London and Manchester offices. London and Manchester. Contact B or C.

### 3. Human Resources/Personnel Software Systems

Optimum use of human resources is becoming widely recognised as of vital importance to UK companies. IAL Gemini is at the forefront of the development and installation of successful personnel systems. Senior Consultants are required to work with clients specifying and implementing InSci system modules and bespoke systems. London and Manchester. Contact B or C.

### 4. Commercial and Industrial Systems

A large number of companies use the services of IAL Gemini for a wide variety of interesting and diverse tasks covering all aspects of computing. Projects range from small accounting systems for first-time business users to industrial applications such as real-time process control. All grades of programmers and analysts are required to work in these fields. London and Manchester. Contact B or C.
